	Examiner	Art Unit	
	Ron E. Pompey	2812	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on telephone interview 3/2/07.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☐ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 2-4 is/are allowed.
- 6) ☒ Claim(s) 1 and 6-8 is/are rejected.
- 7) ☒ Claim(s) 9-14 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Dubal et al. (US 6704086).

Dubal discloses the limitations of:

Claim 1: providing a liquid crystal layer between a plurality of pixel electrodes and an electrode opposite to said pixel electrodes (col. 1, lns. 54-59; and col. 3, ln. 25 – col. 4, ln.12), wherein liquid crystals of said liquid crystal layer have bistability or hysteresis characteristics (col. 2, lns. 22-42); and

making said liquid crystals monostable by applying an electric field between said pixel electrodes and said electrode opposite to said pixel electrodes in such a manner that all of said pixel electrodes are given a fixed electric potential during a common time period (col. 3, 4-12).

Art Unit: 2812

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dubal et al. (US 6704086), in view of Mikami (US 6115017).

Dubal, as indicated above, discloses all the features of the claims except:

Claim 6: forming a first conductive film over a first substrate;

forming a first insulating film over said first conductive film;

forming a thin film transistor over said first insulating film;

forming a second insulating film over the thin film transistor;

forming a pixel electrode over the second insulating film;

forming a second conductive film over a second substrate.

a. However, Mikami discloses:

forming a first conductive film (54, fig. 7) over a first substrate;

forming a first insulating film (16, fig. 7) over said first conductive film;

forming a thin film transistor over said first insulating film (51, fig. 7);

forming a second insulating film over the thin film transistor(52, fig. 7);

forming a pixel electrode over the second insulating film (7, fig. 7) (col. 7, lns. 6-

56);

Art Unit: 2812

forming a second conductive film over a second substrate (9, fig. 1).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the active matrix in Dubal, with the first and second insulative film as taught by Mikami, because the insulating layers will reduce use of wafer area to integrate the pixel and the first conductive layer together.

5. Claims 7 and 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dubal et al. (US 6704086), in view of Mikami et al. (US 6,108,061), and in further view of Sako et al. (US 6,108,061).

Dubal and Mikami do not disclose the claimed limitation(s) of:

while an ultraviolet ray is applied to said liquid crystals.

However,

a. Sako discloses the above claimed limitations regarding:

while an ultraviolet ray is applied to said liquid crystals (col. 8, Ins. 16-25).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine Sako with Dubal or Mikami, because the ultraviolet ray forms a polymer reticulate structure, from the mixture of liquid crystal material and polymer material, producing a stable state for the liquid crystal elements in the liquid crystal material.

Allowable Subject Matter

5. Claims 2, 3 and 4 are allowed.

Art Unit: 2812

6. Claims 9-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, either singly or in combination, fails to disclose the limitations of: while electric voltages having the same polarity are applied to said pixel electrode and an ultraviolet ray is irradiated to said liquid crystals.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Iwaki et al. (US 5,600,485) electric voltages having the same polarity are applied to said pixel electrode and an ultraviolet ray is irradiated to said liquid crystals.

Noguchi (US 5,040,875) voltage applied to opposing electrodes produce an electric field.

Response to Arguments

2. Applicant's arguments, see interview summary, filed in the current action, with respect to the rejection(s) of claim(s) 1 and 6-8 under 35 U.S.C. 102(e) and 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Dubal.

Art Unit: 2812

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ron E. Pompey whose telephone number is (571) 272-1680. The examiner can normally be reached on 9AM - 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael S. Lebentritt can be reached on (571) 272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
